

TC-12 ACOUSTIC SYSTEM

SP-TC-12-P: SPECIAL SIDE WALL BRACKET FOR TC-12

Caution

Kelonik will provide all installation instructions and speakers' specification to the property, the cinema exhibitor and any staff (installation technicians, builders, technical architects / building engineers, architects, etc.) involved in the installation of the equipment.

In any case, Kelonik shall have no liability arising from the installation of the equipment, unless Kelonik would take charge of the installation by their own means (directly or indirectly). Kelonik shall only and exclusively be responsible for the equipment warranty.

Without prejudice from the installation instructions and directions that are provided, Kelonik highly recommends that before the installation of the TC-12 ceiling speakers, the property, the cinema integrator, the architect and the false ceiling constructor must first ensure that the false ceiling will be able to support the weight, as well as the possible tangential vibrations that can be transmitted by the speakers to this structure when playing.

This is the cinema responsibility to proceed with strengthening the same in coordination with the cinema integrator, the architect and the false ceiling constructor, in areas where the TC-12 will be located.

Each TC-12 ceiling speaker must also carry additional support slings securely attached to the structural elements either forged, beams, etc. preventing it from falling down to the audience.
